800+ problems ...

Multiples of 3 or 5

Problem 1

If we list all the natural numbers below 10 that are multiples of 3 or 5, we get 3, 5, 6 and 9. The sum of these multiples is 23.

Find the sum of all the multiples of 3 or 5 below 1000.

- Some integers! 1
- Multiples of 3 or 5
 - `X % 3 == 0 // no remainder`
 - `X % 5 == 0 // no remainder`
- Conditionals, branches if
- Loop? While loop
 - **SUM**
 - **Counter variable**

Problem 1: answer 233168

Data Type	Memory Size
<code>bool</code>	1 byte
<code>char</code>	1 byte
<code>int</code>	4 bytes
<code>float</code>	4 bytes
<code>double</code>	8 bytes
<code>std::string</code>	24 bytes

How many **years** are there in 2,147,483,647 **seconds**?

(UNIX TIME)

what is RANDOM?

- Elusive - easier to describe what it *isn't*
- No discernable **pattern**
- Not **predictable**
(Reveals itself in **sequence**)
- Not **deterministic** (the more factors we know, the more causality or pattern we can find, then it's not random)

BUT ...

computers ARE deterministic

SAME INPUTS -> SAME OUTPUTS

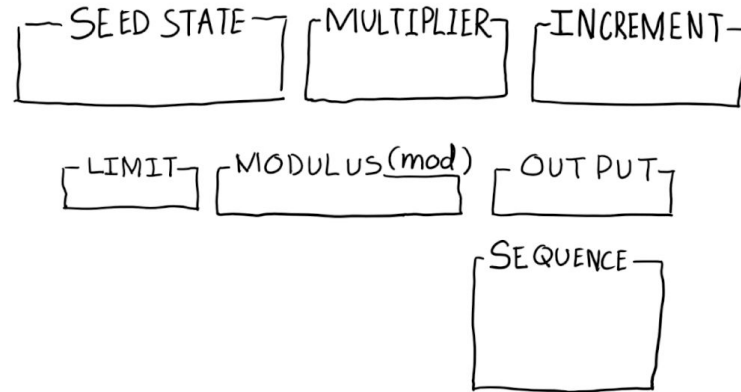

SNL

John von Neumann (here w/Robert Oppenheimer):
"Anyone who considers arithmetical methods of
producing random digits is, of course, in a
state of sin."

Pseudorandom! a **simulation**, random enough

- `rand()` = Linear Congruential Generator (LCG)
- $x = ((a * x) + c) \% m$
- Next number based on the previous (**state**)

`srand()` = SEED

RANDOMNESS FROM SEED ONLY; SAME SEED = SAME SEQUENCE!

Random integer between 0 and 1:

```
rand() % 2;
```

Random integer between 0 and 9:

```
rand() % 10;
```

Random integer between 0 and 10:

```
rand() % 11;
```

Random integer between 10 and 20:

```
rand() % 11 + 10;
```

- $x = ((a * x) + c) \% m$
- if: a (multiplier) = 3
- if: c (incrementor) = 4
- if: m (modulo %) = 15
- if: $x_0 = 1$
- Write out the first 6 numbers of this sequence.

COLOSSAL CAVE ADVENTURE

Mammoth Cave, Kentucky

Longest cave in the world

FORTRAN, 700 lines of code

A diagram showing a magnetic field represented by a cross (X) indicating it is directed into the page. A horizontal wire carries a current I to the right. A vertical line with an upward arrow is labeled 'N' at the top and 'S' at the bottom, representing the magnetic field direction. A vertical dashed line with a circle and a dot in the center is labeled 'U' at the top and 'D' at the bottom, representing the current direction.
